BETA RSC50 2.0

The New Made-in-Italy Workshop Equipment with a 70 cm Deep Worktop

An evolution of the Made-in-Italy RSC50 workshop equipment line, **Beta RSC50 2.0** has been designed and manufactured entirely in **Beta's Italian production facilities**, with the utmost attention to the selection of high-quality materials.

The new line stands out for its **attention to detail, refined finishes**, and a **sturdy, 70 cm deep worktop**, which provides a large, comfortable and functional surface, perfectly suited to the most demanding workshop tasks.

The possibility to be fully customized to suit specific workspace requirements ensures maximum **versatility, efficiency** and **flexibility**. It is available both in **predefined combinations** developed by Beta and as **individually configurable layouts**, through a wide range of undercounter modules, superstructures and complementary elements, also thanks to the 3D online configurator available at www.beta-tools.com.

Key Features:

- **Sturdy, 70 cm deep worktop**, available in different materials: painted sheet metal, multi-ply wood, or MDF with stainless steel cladding. The holes for mounting a vice make it even more practical and suitable for the most demanding applications.

- **Wide range of compatible assortments:** drawers have standard dimensions (588×367 mm), ensuring compatibility with most existing Beta tool assortments, supplied in either soft foam tray or soft thermoformed tray.
- **Customizable modules:** the system can be fully designed and configured, from worktop material selection and undercounter modules, to handle colors and integrated lighting installed under worktops or suspended cabinet.
- **Quick and easy assembly:** modules are designed for intuitive and fast installation.
